

The Diplomatic Limousine from Trasco represents the ultimate in functional vehicles. Stretched by 32 inches (81cms) over the standard 124 series Mercedes Benz upon which it is based, there is ample space and comfort for up to 7 passengers and a full compliment of luggage to be carried quickly, reliably and economically.

Seating in the rear provides for three with full limousine legroom with the additional row of seats folded up. The occasional seats fold down individually to provide seating for one, two or three extra passengers. The large rear door provides easy access to the rear compartment and the large glass area gives excellent visibility for all occupants. All the comfort orientated optional equipment normally associated with luxury motoring can be specified if required.

The diplomatic limousine was designed, developed and is manufactured in Trasco's purpose built facility in Bremen, West Germany. The factory is set up for volume production to satisfy the demand from diplomatic and business communities worldwide for a reliable and attractively priced Limousine that will stand the test of time. The Limousine has undergone full German T.U.V. approval testing as do all Trasco products in keeping with the emphasis given by the company to sound engineering and high quality.

Production times have been trimmed to four weeks and Trasco is able to supply completed vehicles based on any of the Mercedes 124 series of 200-300 cars, both petrol and diesel or convert customers existing vehicles. The performance of the diplomatic Limousine is very similar to the original base model and there are extensive modifications to the suspension and axles to compensate for the increase in weight. All in all a product to be relied upon from a company considered to be a world leader in the field of specialist Limousine manufacturing.
